In Case of Power Loss: Biosafety Cabinet (Class II/A)

- Biosafety cabinets will not work during an electrical power loss.
- Check biosafety cabinets and take the following precautions, if applicable:
  - Stop all operations.
  - Securely cap any open containers.
  - Close biosafety cabinet sashes.
  - Contact building facilities coordinator.

In Case of Ventilation System Failure: Biosafety Cabinet (Class II/A)

- All biosafety cabinets have internal fans. This BSC is not connected to building ventilation because it exhausts back in to the room through it’s top (Class II/A). It will continue to work properly if building ventilation fails.
